

## VIN CHIP™ PLUS PACK SUITABLE FOR ALL CARAVAN MODELS

This pack includes all you need to retro fit your Touring Caravan to ensure it is protected by the VIN CHIP™ police traceable scheme.

### Your VIN CHIP™ Plus pack contains:

- 1x RFID Chips
- 6 x Tamper Evident Labels
- 1x Door Warning Label
- 1x Microdot Pen
- 1x UV Pen
- 1x UV Torch
- 1x Lint Free Microfibre Cloth

## FITTING INSTRUCTIONS

Please read carefully before commencing installation, exercise caution when removing the protective film or backing material of the labels and lozenges as they contain security cuts and it is possible to damage the item.

### Fitting the Electronic RFID Chip

When choosing a location for your chip, bear in mind that it must be capable of being read by a police scanner at 6m distance when traveling up to 60mph. The front and rear cupboards and wardrobes are potential locations for the application. Determine your location for the chip, ensuring that you have a large enough area.

Ensure the surface is clean and dry, remove the backing paper and firmly rub the chip onto the surface. The police need to be able to read the chip from outside the Caravan. It can be read through almost any other non-metallic surfaces such as wood, glass, glass-fibre reinforced plastic etc.

### Fitting the Door Warning Label

Ensure the window area that you have chosen to place the Door Warning Label is dry and clean of grease and dirt by wiping the area with the Microfibre cloth. Carefully remove the protective film of the label and firmly rub onto the window surface ensuring no air bubbles are present.

### Fitting the Internal Tamper Evident Labels

The Internal Tamper Evident Labels can be placed in any position you choose. These are often best used on the inside of cupboard doors or the underside of drawers. Each Tamper Evident Label is made of tamper evident material designed to chip upon any attempt at removal. Ensure the area is dry and clean of the dirt and grease. Carefully remove the protective film of the label and firmly rub onto the surface ensuring no air bubbles are present.

### Using the Ultraviolet Security Pen

A simple and easy way to further enhance the identity of your caravan is to write the last 8 digits of your caravan VIN onto the internal framework of the touring caravan. You can also use the ultraviolet pen to mark your personal items & removable objects such as TVs with your home postcode.

### Using the Ultraviolet Torch

Once you have marked your caravan and any additional property using the Ultraviolet Security Pen you can use the torch to view the markings, as ultraviolet ink is invisible to the naked eye.

### Using the Microdot Pen

The Microdots should be applied over as wide an area as possible to give maximum coverage. Choose the area to apply the dots carefully, remembering they need to be accessible. Do NOT place on removable objects. It is fast, efficient and easy to apply. Simply shake the pen well and using the compression plunger on the top of the pen, press down and apply the Microdots. The dots will show as black specks on lighter surfaces.

Once you have completed the installation of the pack, please call **CRiS** on **0203 282 1000** or email **info@cris.co.uk** to inform us where the electronic RFID chip has been fitted.

**Health & Safety for Lozenges & Labels:** Your safety in fitting this kit is of paramount importance, fitting your VIN CHIP™ kit is a non-hazardous process providing you follow the instructions carefully. These products are neither hazardous nor toxic, labels and lozenges may produce an allergic reaction if not handled correctly. However, the following describes possible accidents due to incorrect handling of the product and first aid treatment for such accidents. Contact with eyes - This is not a hazardous substance. However, if the product has entered your eyes, wash eyes thoroughly with pure water for at least 15 minutes, and consult a doctor. Contact with skin - Wash your skin with cold or lukewarm water. If a rash develops or if there is any pain, consult a doctor. Inhaling - This product is solid, thus there is no chance of inhalation. Swallowing - This is not a hazardous substance. However, wash mouth roughly with pure water. If possible, put your finger into your throat to induce vomiting, and consult a doctor.

**Health & Safety for Microdots:** The microdots provided are not toxic, but are extremely small and light, avoid close contact to prevent inhalation and keep clear of eyes. The dot adhesive is water based non-volatile, non-flammable liquid. It is low in toxicity but care should be taken not to ingest the liquid. If accidentally drunk take plenty of liquid, preferably milk and DO NOT induce vomiting. In case of accidental contact with eyes wash liberally with clean water. Contact with skin should be avoided (some sensitive skin types maybe irritated) and if contact occurs wash with soap and water.

**RFID Information:** The RFID has a 6 month shelf life from purchase. Store in dark conditions +20°C / RH 50%, Solvent free permanent adhesive is used. The RFID chip is fairly fragile.

**Security Label Information:** Handle with care. Ideal Store condition is 10~30°C and humidity is 70%RH or less. Do not allow moisture and chemicals in contact with the product.
